

Conservation Tree/Shrub Groups

Included in this subsection is the soil criteria (soil properties and hazards) used to develop Conservation Tree/Shrub Groups (CTSG's). The criteria were used to assign a CTSG to soil components in a county soil data set. Also included is a CTSG list for the county by map unit symbol and soil component.

The tree and shrub species for the CTSG's are currently being worked on. The CTSG's have replaced the Windbreak Groups.
